

Capability Statement

Data Centres

Griffdon Engineering is a trusted delivery partner for hyperscale, colocation, and enterprise data centre projects across Europe. With extensive experience in mission-critical environments, we provide high-quality electrical installation services that support the reliability, resilience, and performance requirements of modern digital infrastructure.

Our expertise covers all phases of data centre construction, including power distribution systems, cable containment, busbar installations, lighting systems, earthing and lightning protection, testing, commissioning, and quality assurance. We work collaboratively with clients, consultants, and contractors to deliver projects safely, efficiently, and to the highest industry standards.

Driven by our commitment to Safety, Quality, Integrity, and People, Griffdon Engineering continues to support the growth of the digital economy through the successful delivery of world-class data centre infrastructure.
