

Capability Statement

Earthing & Lightning Protection

Effective earthing and lightning protection systems are essential for safeguarding personnel, protecting critical assets, and ensuring operational reliability. Griffdon Engineering provides comprehensive design support, installation, testing, and certification services for a wide range of industrial, commercial, and mission-critical facilities.

Our experienced teams deliver earth grid systems, bonding networks, lightning protection installations, surge protection solutions, and associated testing services in accordance with recognised international standards. Every solution is tailored to the specific requirements of the project, ensuring optimum protection and long-term performance.

Through a combination of technical expertise, quality workmanship, and rigorous testing procedures, we help clients minimise risk and maintain the integrity of their electrical infrastructure.
